

## Questionnaire

- How you can evaluate the didactic materials and the activity proposed? Do you like them?

Yes, very much	Yes	Not much	Not at all
yes			

Comment:

We treated very interesting topics. I think they can pleasure both to high school kids.

- Was the material prepared for the activity adequate? If not what did you miss?

I think that the material was appropriate, maybe it would have been nice to play the activities during the course of the seminar

- Do you think this activity can be useful for other subjects as well ? If yes, which ones ?

I think that this activity may be useful in the orientation that is done in high school, where the boys decide the field of study to choose at the university. In this way, they discover the sides of mathematics in their school have never seen, I can stay looking so cute.

- Can you understand clearly the arguments presented during the activity ?

You, are quite clear. I think there is no problem even for kids future

- Did you know all the technology that you needed for the activity? If not, what did you miss ?

Today technology is important, without it the search would proceed in steps very slow.

- Does the course achieve the main purpose : to present real dynamical approach in math teaching ?

I think yes, we have also understood how to deal with certain issues seeing us as future teachers.

- Do you think that you were successful in the activity?

I can say that is one of the most exciting activities that barks never followed
